Manufacturing Information

See container date code and incorporated Date Code Guide for manufacturing date. This certification applies to products manufactured within three years of the test date indicated in the Schedule of Conforming Products.

Testing Information

Test data and other relevant information have been evaluated for compliance with 16 CFR 1303 as of the date indicated on Schedule of Conforming Products.

Yenkin-Majestic Paint Corporation has engaged in a testing program to document conformity with the above-indicated regulations issued by the Consumer Products Safety Commission. For many years we have specified that all raw materials used in our architectural coatings, including the products identified in the incorporated Schedule of Conforming Products, be free of heavy metals including lead. We have until this time relied upon the technical data sheets, material safety data sheets, certificates of analysis, and other certifications provided by our suppliers to ensure that our specifications have been met. Under the CPSC regulation(s) identified above, we are implementing our own internal testing program that will further assure the compliance of our products, as reflected in the results indicated in the incorporated Schedule of Conforming Products.
